DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to a communication technique between two wireless communication systems with area information acquired, classified in class 455, subclass 446 (for cell planning and layout).
 - II. Claim 5, drawn to a communication technique between two wireless communication systems with area permission required, classified in class 455, subclass 411 (for privacy, lock out or authentication).
 - III. Claims 6-11, drawn to a communication technique between two wireless communication systems with an identification unit for identifying different types and a control unit for adapting to radio laws to different countries, classified in class 455, subclass 422.1.
 - IV. Claims 12-18, drawn to a wireless communication apparatus using a wide band with a memory for storing interfered frequency bands, classified in 455/412.1.
 - V. Claims 19-20, drawn to a wireless communication apparatus performing wireless communication including a plurality of communication frequency bands and technique of setting and controlling interfered bands, classified in 455/67.13.
2. Inventions I, II, III, IV and V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

Art Unit: 2618

case, the combination as claimed does not require the particulars of the subcombination as claimed because a communication technique between two wireless communication systems with area information acquired as of Invention I which has distinct application to other inventions. The subcombination has separate utility such as a communication technique between two wireless communication systems with area permission required as of Invention II; a communication technique between two wireless communication systems with an identification unit for identifying different types and a control unit for adapting to radio laws to different countries as of Invention III; a wireless communication apparatus using a wide band with a memory for storing interfered frequency bands as of Invention IV; and a wireless communication apparatus performing wireless communication including a plurality of communication frequency bands and technique of setting and controlling interfered bands as of Invention IV.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and/or III, and/or IV and/or V, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. Affirmation of this election must be made by applicant in replying to this Office action.
